

Clamp On Vibrators

Portable quick clamp vibrators

The NAVCO FV is a portable clamp-on vibrator that provides convenience in a variety of situations. The FV units feature a rugged, one-piece construction, and are equipped with a built in vise style clamping system. This built in vise eliminates the need for special mounting brackets often required by other portable models.

Applications

The NAVCO FV is often used as an external form vibrator for the settling of concrete. Another common application is found in foundries. The FV gives fast, clean draws – this extends core box life by eliminating distortion.

The FV is ideal for many other industrial applications where a clamp-on assembly is preferred over more permanently mounted solutions. This is especially true when other portables may not provide adequate force.

Benefits

- Effectively settles concrete to remove air and excess water.
- Easily clamps to most structures with vise style clamp.
- Completely portable - move the FV as needed!
- Vibration frequency is easily controlled by adjusting the air supply from 20 to 60 PSI.

Dimensions & Specifications

Model	Length	Jaw Opening Size	Weight (lbs)
FV 2"	9 1/2"	1/2 – 3"	22
